AAC Penhold Canada Prairie Spring Red Wheat

Description:

AAC Penhold is a very short strong strawed CPS wheat that has high yield potential, improved protein content and good disease resistance.

AAC Penhold is moderately resistant to FHB and has one of the best disease packages in a CPS wheat so it should be well adapted to all growing regions of western Canada especially those areas concerned with lodging and straw management.

Parentage: 5700PR/HY644-BW//HY469

Strengths:

- Grain yield 106% of 5700PR and 97% of 5701PR (average of all sites in 2010 to 2012 High Yield Wheat Registration trials)
- Improved lodging tolerance compared to 5700PR and 5701PR
- Significantly shorter than 5700PR and 5701PR
- Early maturing, 2 days earlier than 5700PR
- Very large seed size and heavy test weight
- Improved protein over 5700PR and 5701PR
- Moderately Resistant (good) to FHB
- Resistant to common bunt and leaf rust
- Moderately resistant to stripe rust and stem rust Ug99 and variants

Neutral Traits:

- Intermediate resistance to leaf spot and loose smut

Weaknesses:

- Response to yellow rust has not been consistent

Breeders:

Dr. Richard Cuthbert and Dr. Ron DePauw
Semiarid Prairie Agricultural Research Centre
Agriculture and Agri-Food Canada
Swift Current, SK

Agronomic Tip: AAC Penhold responds favorably to a heavier seeding rate especially in higher moisture areas. For CPS wheat, the optimum seeding rates ranged from 26 to 32 seeds/ft² in the Dark Brown soil zone to 33 to 42 seeds/ft² in the Black soil zone (this can be in the 180lb/ac range.)

The exceptionally strong straw of AAC Penhold can handle higher fertility – follow fertility recommendations for the target yield of your fields.
