AAC Douglas White Hulled Milling Oat

Progress Through Research
Le progrès grâce à la recherche

AAC Douglas is a high β -glucan white hulled oat with high grain yield potential and excellent groat percentage. AAC Douglas performed best in the rust zone of the eastern Prairies and would be a potential Summit replacement. AAC Douglas is rated resistant to smut and moderately resistant to oat crown rust and FHB. AAC Douglas has performed very well in provincial variety trials and looks to be well-suited for production across all western Canada.

Parentage: OT7070/CS Camden

Strengths:

- High β -glucan
- High grain yield potential – 104% Summit
- Good lodging resistance, better than the checks
- Resistant to smut
- Moderately resistant to crown rust and FHB
- White hull

Neutral Traits:

- Intermediate resistance to stem rust and BYVD
- Medium height, -2 cm to AC Morgan and +4 cm to Summit

Weaknesses:

- Slightly higher % thins and lower % plump than the mean of the checks

Breeder:

Dr. Jennifer Mitchell Fetch,
Brandon Research & Development Centre
Agriculture and Agri-Food Canada
