

Genes that fit your farm.

## *NEW* Modano R2X

2800 HU (RM 1.0)

- ✓ Complementary variety to OAC Challenger R2 due to its tall plant height and average standability. Features a bushy canopy type in comparison to OAC Challenger R2's intermediate canopy type
- ✓ Good disease package and strong yields for its maturity
- ✓ Moderately resistant to Brown Stem Rot

Bushy Canopy Tall Height

CHARACTERISTICS						MANAGEMENT		DISEASE & PATHOGENS			
Hilum Colour	Protein (%)	Plant Height	Lodging	Canopy Type	Row Width (")	Soil Type	White Mold*	SCN Resistance (Source)	Phytophthora Root Rot Field Tolerance	Phytophthora Root Rot Resistance Gene(s)	
Black	N/A	Tall	Average	Bushy	15 – 30	All	2.5	Yes (PI 88788)	MR - MS	1k	

Data values were collected under different management practices at different locations in different years, and are for comparison purposes only. For more data see Ontario Soybean Performance Trials: gosoy.ca

N/A = not available; MR = Moderately Resistant; MS = Moderately Susceptible

\*White Mold: 1 = no symptoms, 5 = susceptible

Monsanto Company is a member of Excellence Through Stewardship® (ETS). Monsanto products are commercialized in accordance with ETS Product Launch Stewardship® (Launch Stewardshi and in compliance with Monsanto's Policy for Commercialization of Biotechnology-Derived Plant Products in Commodity Crops. These products have been approved for import into key export markets with functioning regulatory systems. Any crop or material produced from these products can only be exported to, or used, processed or sold in countries where all necessary regulatory approvals have been granted. It is a violation of national and international law to move material containing biotech traits across boundaries into nations where import is not permitted. Growers should talk to their grain handler or product purchaser to confirm their buying position for these products.
